## **Rescentris Named *Outstanding Technology Service Company of the Year* for its CERF Electronic Lab Notebook Solution**

**Columbus, OH** – Jan. 23, 2007 – Rescentris, a leading provider of electronic lab notebook (ELN) software for the life sciences industry, today announced that it received TechColumbus' Outstanding Service TopCAT Award for a company with fewer than 50 employees.

Rescentris received the award for helping customers maximize efficiency gains by deploying its ELN to replace paper-based lab records and documents scattered across their organizations. Rescentris' CERF (Collaborative Electronic Research Framework™) ELN was also recently awarded "Best Knowledge Management Platform for Biological R&D." Rescentris works in partnership with its customers to help them achieve their scientific and business goals by delivering flexible CERF solutions that are adapted to the way different researchers work.

"I am very proud of our entire team," said Rescentris CEO Dr. Adel Mikhail. "It was their efforts and constant drive to deliver the highest level of service to our customers that enabled us to win this TopCAT award." He continued, "We're glad to represent Ohio. Our origins trace back to the BTC technology incubator ten years ago, and Third Frontier funding from the State in collaboration with OSU BioMedical Informatics was critical to our success."

The TopCAT Awards are the premier technology event in Ohio. The gala ceremony drew more than 750 executives to recognize the year's outstanding achievements in technology leadership. Award winners were chosen from hundreds of entries across the region.

"It's truly an honor to be recognized like this in your own community, and among so many outstanding finalists," stated Rescentris CSO Dr. Jeff Spitzner, who received the award at the event. "TechColumbus and the sponsors put on a very impressive program." TechColumbus' 2006 TopCAT Awards was supported by many of the leading organizations in Central Ohio, including major sponsors Battelle, Calfee, Time Warner Cable Business Class, and Chemical Abstracts Service (CAS).

### **About Rescentris, Inc.**

Rescentris provides electronic laboratory notebook and scientific content management software solutions that enable R&D organizations to create, organize, share, and exploit their knowledge assets. Its product, CERF, provides a unified desktop for knowledge workers and delivers R&D performance improvements for stakeholders throughout life sciences research organizations. CERF is The Biologist's Notebook™ - "your data, applications, and workflows – just better." See [www.rescentris.com](http://www.rescentris.com) for more information.
